## **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: wing is an examiner's statement of reasons for allowance:

The prior art of record does not disclose or fairly suggest a band-pass ladder filter having terminal impedances of Z0, wherein the filter is formed with film bulk acoustic resonator elements, and wherein the "characteristic impedance of any one of the series elements is Z1" and the "characteristic impedance of any one of the shunt elements is Z2" and the recited relationships between Z0, Z1 and Z2 hold. The following thorough discussion of the reference to Bradley et al., considered to be the closest prior art, should also be noted.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

## Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bradley et al. U.S. 6,262,637 discloses a duplexer comprised of two bandpass ladder filters formed with film bulk acoustic resonators (FBARs)[see Fig. 6].

Bradley et al. also discloses that in the receive filter 204, in order to match the input/output terminal characteristic impedance of 50 Ohms, the shunt resonators 227 and 221 adjacent the input/output terminals are "smaller in size than the shunt FBARs

Art Unit: 2817

223 and 225" (see col. 13, lines 29-35). Because the size of the resonators determines their individual characteristic impedances, it would appear that the two larger resonators 223 and 225 have a larger characteristic impedance than the two smaller resonators, as can be determined from the known equations on page 4 lines 7-8 of Applicants' spec. (see also Applicants' Table 1 which shows the shunt resonator with the larger area has the smaller characteristic impedance of 35 Ohms). However, not enough information about the materials, and thicknesses thereof, of the resonators in Bradley et al. is known to calculate the characteristic impedances and to evaluate the relation of the characteristic impedance of the shunt resonators Z2 to the terminal impedance Z0. For example, it may be that the larger shunt resonators 223 and 225 have a 50 Ohm characteristic impedance while the two smaller shunt resonators have a characteristic impedance of greater than 50 Ohms, which would be the claimed requirement for the series resonators and not the shunt resonators. Furthermore, Bradley et al. does not disclose the characteristic impedances of the series resonators and so does not show any one of the series resonators having a characteristic impedance that is different from the other resonators which would be assumed to be different from 50 Ohms.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Barbara Summons whose telephone number is (571) 272-1771. The examiner can normally be reached on M-Th, M-Fr.

Application/Control Number: 10/697,474 Page 4

Art Unit: 2817

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bob Pascal can be reached on (571) 271-1769. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
